Re: City of Papillion –Schram Road ROW 84th to 90th Street Construction

Since the completion of the tree and brush removal phase of this project, the City of Papillion has been coordinating with several local utility companies for the relocation of the existing facilities to allow for the physical construction of Schram Road from 84th to 90th Street. Relocation of those utilities is nearing completion, and the next phase of construction is scheduled to begin July 5, 2016. The contractor for the project is Roloff Construction Inc. Full closure of this section of Schram Road will begin June 27, 2016 to allow utilities to complete their final relocations. Closure is expected to extend until project completion in Mid-November. Construction of this project will include, but is not limited to, clearing and grubbing of the remaining vegetation, grading, retaining wall construction, storm sewer removals and installations, water line adjustments, street paving, backfilling of curb lines and right-of-way, trail and sidewalk construction, pavement striping and signage, and finish grading and site restoration.

The City of Papillion is currently working on the design phase for landscaping and irrigation as well as fencing and decorative lighting, which will be the last phase of this project. That work will be completed under separate contracts that have not yet been publically let.

For further information on the contract documents, please visit the City of Papillion's project webpage at http://www.papillion.org/schram_road.cfm. Please direct any questions about the construction project to Jeff Thompson, Papillion City Engineer at 402-898-9092 or jefft@papillion.org.

Respectfully Submitted,

Jeffrey L Thompson, P.E., CPESC, CFM
